Trigonometric identities are fundamental to mastering trigonometry. They allow us to simplify complex expressions, solve equations, and prove other identities. The book would likely dedicate a substantial portion to these identities, emphasizing their derivation and application.

| Identity             | Description                                                           | Example                                               |
|----------------------|-----------------------------------------------------------------------|-------------------------------------------------------|
| Pythagorean Identity | Relates sine, cosine, and tangent.                                    | $\sin^2\theta + \cos^2\theta = 1$                     |
| Sum-to-Product       | Expresses sums or differences of trigonometric functions as products. | $\cos(A) + \cos(B) = 2\cos((A+B)/2)\cos((A-B)/2)$     |
| Product-to-Sum       | Expresses products of trigonometric functions as sums or differences. | $\sin(A)\cos(B) = \frac{1}{2}[\sin(A+B) + \sin(A-B)]$ |

Understanding these identities is key to solving many complex trigonometric equations. For instance,

consider solving the equation  $2\sin^2x - \cos x = 1$ . We can use the Pythagorean identity ( $\sin^2x + \cos^2x = 1$ ) to rewrite the equation entirely in terms of cosine and then solve for  $x$ .
