- Properties of Operations:** Understanding and applying properties like the commutative, associative, and distributive properties to simplify calculations.

2. Ratios and Proportional Relationships

This is a significant area of focus in 7th grade, laying the groundwork for algebra. Expect questions on:

1. **Understanding Ratios:** Expressing relationships between two quantities in different ways (e.g., 3:5, $\frac{3}{5}$, "3 to 5").
2. **Proportional Relationships:** Identifying if two quantities are proportional, understanding unit rates, and solving problems involving proportional reasoning. This could involve scaling recipes, calculating travel times, or understanding maps.
3. **Unit Rates:** Finding the rate per one unit, which is crucial for comparing different options (e.g., which is a better deal per ounce?).
4. **Constant of Proportionality:** Recognizing and calculating the constant factor that relates two proportional quantities.

3. Expressions and Equations

This is where the algebraic journey truly begins. Students will be tested on:

1. **Writing and Evaluating Expressions:** Translating word problems into algebraic expressions and then substituting values to find the result. For example, "5 more than twice a number" becomes $2x + 5$.
