3	How can I effectively use Wireshark for my M.Tech Computer Network lab assignments?	Wireshark is crucial for understanding network traffic. Focus on capturing packets related to specific protocols (e.g., TCP, UDP, HTTP), applying filters to isolate relevant data, and analyzing packet headers to understand communication flow, identify errors, and troubleshoot issues. Practice analyzing different types of network communication.
4	What kind of projects or assignments can I expect in the first semester?	Common assignments include implementing basic network applications like chat clients/servers, file transfer protocols (FTP), or simple web servers using socket programming. You might also be asked to simulate network scenarios in Packet Tracer, analyze network performance metrics, or set up and configure basic network devices.

5	Are there specific software or tools I'll need to install for the M.Tech Computer Network lab?	You'll likely need to install Wireshark for packet analysis and Cisco Packet Tracer for network simulation. Depending on your assignments, you might also need a compiler for C/C++ or a Python interpreter. Some labs might utilize virtual machines (like VirtualBox or VMware) for creating isolated network environments.
6	What are some common challenges students face in the first semester M.Tech Computer Network lab, and how can I overcome them?	Common challenges include understanding complex protocols, debugging socket programming errors, and effectively using simulation tools. To overcome these, actively participate in lab sessions, refer to the manual and online resources, form study groups, and don't hesitate to ask your professor or lab assistants for clarification.
