Troubleshooting with Task Manager

Task Manager is an invaluable tool for diagnosing and resolving common computer problems:

1. Dealing with Frozen Applications

This is the most common use case. If an application stops responding, you'll often see "(Not Responding)" next to its name in the "Processes" tab.

- 1. Open Task Manager (using any of the methods described).**
- 2. Navigate to the "Processes" tab.**
- 3. Locate the unresponsive application.**
- 4. Right-click on it and select "End task."**

This will forcibly close the application, freeing up your system. You will, however, lose any unsaved work in that application.

2. Identifying Resource Hogs

If your computer is running slowly, check the "Processes" tab and sort by CPU or Memory usage.

- 1. Open Task Manager and go to the "Processes" tab.**
- 2. Click on the "CPU" column header to sort processes by their CPU usage (highest first).**
- 3. Click on the "Memory" column header to sort by memory usage.**
- 4. Observe which applications or processes are consuming a disproportionately high amount of resources.**

If you identify a program you don't recognize or one that's consuming excessive resources unexpectedly, you can research it online. If it's not essential, you can try ending its task. Be cautious about ending unfamiliar system processes, as this can lead to instability.

3. Improving Boot Times

A slow startup can be frustrating. The "Startup" tab allows you to control what launches automatically.

- 1. Open Task Manager and go to the "Startup" tab.**
- 2. Review the list of startup items and their impact.**
- 3. For any application you don't need to start immediately upon booting, right-click it and select "Disable."**

Disabling unnecessary startup items can significantly reduce boot times and free up system resources from the get-go.

Advanced Tips and Tricks

- 1. "More details" vs. "Fewer details":** When you first open Task Manager, you might see a "More details" button. Clicking this expands the interface to show all the tabs and detailed information. If it's already expanded, you'll see "Fewer details" to collapse it.
- 2. Pinning Task Manager:** You can keep Task Manager always on top of other windows. Go to Options > Always on top (or View > Always on top in older versions).
- 3. Creating a Shortcut:** You can create a desktop shortcut for Task Manager for even quicker access. Right-click on your desktop, select "New" > "Shortcut," and in the location field, type

"taskmgr.exe."

- 4. Monitoring Specific Processes:** In the "Details" tab, you can right-click a process and select "Set priority" to give it more or less CPU time. Use this with extreme caution.
