Once the pre-operation checks are complete, you can proceed with starting and operating the compressor. This section details the standard operating sequence for the Atlas Copco XATS 156.

A. Starting the Engine: The Initial Ignition

Ensure the compressor is in a neutral state (no load). Turn the ignition key to the 'ON' position and allow the pre-heating system (if applicable) to activate. Crank the engine. Once the engine starts, release the key and allow it to warm up at idle speed as recommended by the manufacturer.

B. Loading the Compressor: Engaging the Airflow

Once the engine has reached its operating temperature and stable idle, engage the compressor. This is typically done via a lever or button on the control panel that moves the compressor from an unloaded to a loaded state. You will notice an increase in engine RPM and the commencement of air production.

C. Monitoring Operating Parameters: Vigilance is Key

During operation, continuously monitor the gauges on the control panel. Pay close attention to:

1. **Air Pressure:** Ensure it remains within the specified operating range.
2. **Engine Coolant Temperature:** Prevent overheating.
3. **Oil Temperature and Pressure:** Critical for engine and compressor longevity.
4. **Hours of Operation:** Essential for scheduling maintenance.

D. Disconnecting and Shutting Down: A Controlled Stop

To shut down the compressor, first unload the compressor (disengage the load). This allows the engine to return to idle speed. Then, turn the ignition key to the 'OFF' position to shut down the engine. Allow the unit to cool down before performing any maintenance or securing the unit.
