Gone are the days of needing to learn intricate coding languages or shell out a fortune for web developers. Google has revolutionized website creation with its user-friendly platform, Google Sites. This intuitive tool allows individuals and small businesses to build beautiful, functional, and responsive websites without any prior technical experience. So, grab a cup of coffee, get comfortable, and let's dive into the exciting world of making your own Google website.

Why Choose Google Sites for Your Website?

Before we roll up our sleeves and start building, let's quickly touch upon why Google Sites is such a fantastic option for many people. It's not just about being free; it's about the sheer accessibility and integration it offers.

Free and Accessible

The most obvious advantage is that Google Sites is completely free to use. You don't need to worry about hosting fees, domain name costs (though you can connect a custom domain later), or subscription charges. All you need is a Google account.

User-Friendly Interface

If you can drag and drop, you can build a Google Site. The interface is incredibly intuitive, with a clear layout that makes it easy to add text, images, videos, and other content. There's no need to understand HTML, CSS, or JavaScript.

Seamless Integration with Google Workspace

This is a game-changer. If you're already using Google Drive, Google Calendar, Google Maps, or YouTube, integrating them into your website is as simple as a few clicks. This makes managing your content and showcasing dynamic information incredibly efficient. For businesses using Google Workspace, this integration is invaluable for streamlining operations.

Responsive Design

Your website will automatically look good on any device – desktops, tablets, and smartphones. This is crucial in today's mobile-first world, ensuring a great user experience for all your visitors. Search engines also favor mobile-friendly sites, so this is a big SEO win.

Collaboration Features

Similar to other Google products, you can invite others to collaborate on your website, making it perfect for team projects or shared business ventures. You can grant editing or viewing permissions, ensuring a smooth workflow.

Getting Started: Your First Steps to Making a Google Website

Ready to build? Let's get you set up and ready to go.

1. Accessing Google Sites

The first step is simple. Navigate to sites.google.com/new. You'll be prompted to log in with your Google account. If you don't have one, you can create one for free.

2. Choosing a Template or Starting Fresh

Once logged in, you'll see a dashboard. At the top, you'll find a section called "Start a new site." You have two main options:

1. **Template Gallery:** This is highly recommended for beginners. Google offers a variety of pre-designed templates for different purposes – portfolios, events, restaurants, projects, and more. These templates provide a solid foundation and design inspiration.
2. **Blank Site:** If you have a clear vision and want to start from scratch, you can choose the blank option.

For this guide, we'll assume you're picking a template, as it's the most straightforward way to learn. Click on a template that best suits your needs.

Understanding the Google Sites Editor: Your Digital Canvas

After selecting a template, you'll be taken to the Google Sites editor. Don't be intimidated; it's designed to be incredibly intuitive. Let's break down the main components you'll see:

The Editing Area

This is the central part of your screen, where you see a live preview of your website. You can click on any element – text boxes, images, sections – to edit it directly. This WYSIWYG (What You See Is What You Get) editor makes designing a breeze.

The Right-Hand Sidebar: Your Toolkit

This is where all the magic happens. The sidebar has three main tabs:

a) Insert Tab: Adding Content Elements

This is your primary content creation hub. Here you can add:

1. **Text Box:** To add paragraphs, headings, and lists.
2. **Images:** Upload from your computer, Google Drive, or search for them online.
3. **Embed:** Paste code from other websites (like videos, maps, or social media feeds) to embed them directly.
4. **Drive:** Directly insert files from your Google Drive, such as documents, spreadsheets, or presentations.
5. **Layouts:** Pre-designed sections with image placeholders and text boxes, perfect for organizing content quickly.
6. **Table of Contents:** Automatically generates a table of contents for your page, great for longer articles.
7. **Image Carousel:** Create a slideshow of images.
8. **Button:** Add clickable buttons that can link to other pages on your site or external URLs.
9. **Divider:** A simple horizontal line to break up content visually.
10. **YouTube:** Search and embed YouTube videos.
11. **Calendar:** Display your Google Calendar.
12. **Map:** Embed Google Maps.
13. **Docs, Slides, Sheets, Forms, Charts:** Directly integrate content from these Google Workspace applications.

b) Pages Tab: Managing Your Website's Structure

This is where you'll build the navigation of your website. You can:

1. **Add New Page:** Create new pages for your site.
2. **Duplicate Page:** Copy an existing page.
3. **Delete Page:** Remove pages you no longer need.
4. **Rearrange Pages:** Drag and drop pages to change the order of your navigation menu.
5. **Subpages:** Create dropdown menus by dragging a page slightly to the right under another page.

Your top-level pages will automatically form your website's navigation menu. You can customize where this

menu appears in the Site Settings.

c) Themes Tab: Styling Your Website

This tab controls the overall look and feel of your website. You can choose from pre-set themes or customize your own:

1. **Themes:** Select from a few different visual styles.
2. **Colors:** Choose a color palette that complements your brand or personal style.
3. **Font Styles:** Select fonts for your headings and body text.

Experimenting with themes and colors is a fun part of personalizing your Google website.

Building Your Website: Step-by-Step Content Creation

Now that you understand the editor, let's start populating your site with content.

Adding and Editing Text

Click on any existing text box and start typing. To add a new text box, go to the "Insert" tab and click "Text Box." You can then use the toolbar that appears above the text to format it (bold, italics, links, font size, etc.). For headings, use the dropdown to select "Heading," "Subheading," or "Title." This is important for SEO and readability.

Uploading and Managing Images

To add an image, go to the "Insert" tab and click "Images." You can upload from your computer, select from Google Photos, or search the web. Once an image is on your page, you can resize it by dragging the corners. You can also crop, replace, or add alt text (crucial for accessibility and SEO!). Double-click an image to access more editing options.

Structuring Your Pages with Sections and Layouts

Think of your page as being built with different sections. You can add a new section by simply inserting content like text boxes or images. Google Sites automatically creates new sections. You can also use the "Layouts" feature on the "Insert" tab to quickly add pre-formatted blocks of content, which is great for showcasing multiple products, team members, or project highlights. To rearrange sections, hover over them, and use the drag handles that appear.

Adding Calls to Action with Buttons

Buttons are vital for guiding your visitors. On the "Insert" tab, select "Button." You can then add text for the button (e.g., "Learn More," "Contact Us," "Shop Now") and link it to another page on your site or an external URL. Place these strategically where you want users to take a specific action.

Integrating Dynamic Content from Google Workspace

This is where Google Sites truly shines. Need to show your upcoming events? Add your Google Calendar. Want to display your company's latest news? Embed a Google Doc or Sheet. Need directions to your physical location? Add a Google Map. Simply go to the "Insert" tab, choose the relevant Google application, and select the content you want to display. It's incredibly powerful for keeping information up-to-date.

Navigating Your Site: Setting Up Menus and Links

A clear navigation structure is key to a good user experience. The "Pages" tab is your control center for this.

Creating Your Navigation Menu

As you add pages in the "Pages" tab, they automatically appear in your site's navigation. The order you set them in the "Pages" tab determines the order in your menu. You can create dropdown menus by dragging a page slightly to the right of another page. To customize your navigation menu's appearance (position, color), go to "Settings" (the gear icon) and then "Navigation."

Linking Pages and External Resources

You can link text, images, and buttons to other pages within your Google website or to external websites. To link text, highlight it, click the link icon in the formatting toolbar, and choose your destination. For images and buttons, there are specific linking options when you select them.

Customizing Your Google Website: Making it Uniquely Yours

Beyond content, personalization is key to a professional and engaging website.

Choosing a Theme and Styling

As mentioned earlier, the "Themes" tab lets you select a pre-defined look and feel. You can then further customize the colors and font styles to match your brand identity. Aim for consistency in your chosen colors and fonts throughout the site.

Adding a Logo and Site Name

In the top-left corner of the editor, you'll see the site title. Click on it to change it. You can also add a logo by clicking the "Add logo" button next to the site title. This adds a professional touch and reinforces your brand.

Header and Footer Customization

Each page has a header section where you can add a background image. You can choose from Google's uploads, select from your computer, or use a URL. Some templates offer pre-designed header layouts. The footer is at the bottom of every page. You can add text, links, or copyright information here. To edit the

footer, scroll to the bottom of any page and click to add content.

Previewing and Publishing Your Google Website

Before your site goes live, it's essential to see how it looks and functions.

Using the Preview Mode

Look for the computer and tablet icons in the top-right corner of the editor. Clicking these icons will take you to preview mode, where you can see how your website will appear on different devices. This is your chance to check for any layout issues or broken links. Remember to test all your links!

Publishing Your Site

When you're happy with your creation, it's time to share it with the world. Click the "Publish" button (usually in the top-right corner). You'll then need to choose a web address for your site. This will be a subdomain of `sitesgoogle.com` (e.g., `sites.google.com/view/your-website-name`). Choose a name that is relevant and easy to remember. You can also decide who can view your site (public, specific people, or private). Click "Publish" again to make your site live!

Going Further: Advanced Tips and SEO for Your Google Website

You've published your site – congratulations! But there's always more you can do to enhance its performance and reach.

Connecting a Custom Domain Name

While you get a free `sitesgoogle.com` address, a custom domain name (e.g., `yourbusiness.com`) looks much more professional. You can purchase a domain name from registrars like Google Domains, GoDaddy, or Namecheap. Once you own a domain, you can connect it to your Google Site through the "Settings" (gear icon) -> "Custom domains" option in the Google Sites editor.

Basic SEO (Search Engine Optimization) for Google Sites

While Google Sites has limitations compared to more advanced platforms, you can still implement basic SEO best practices:

1. **Descriptive Page Titles and Headings:** Use relevant keywords in your page titles (site name) and headings (H1, H2, H3 tags).
2. **Alt Text for Images:** Always add descriptive alt text to your images. This helps search engines understand what the image is about.
3. **Relevant Content:** Create high-quality, informative content that users are searching for.
4. **Internal Linking:** Link between relevant pages on your site to help users and search engines navigate.
5. **Mobile-Friendliness:** Google Sites automatically handles this, which is a huge SEO advantage.

Updating Your Content Regularly

Keeping your website fresh with new content, updated information, or blog posts can improve user engagement and search engine rankings. Google Sites makes it easy to make quick edits.

Analyzing Your Website's Performance

While Google Sites doesn't have built-in analytics like Google Analytics, you can embed a Google Analytics tracking code through the "Embed" feature in the "Insert" tab if you have a Google Analytics account set up for your site. This will give you valuable insights into your visitor behavior.

Conclusion: Your Website Journey Starts Now!

Why Choose Google Sites for Your Website? The Advantages Explained

Before diving into the "how-to," it's crucial to understand why Google Sites is an excellent choice for many individuals and organizations. Its simplicity belies its power, offering a suite of advantages that make it a compelling option:

Seamless Integration with the Google Ecosystem

One of the most significant benefits of Google Sites is its inherent integration with other Google services. Already use Google Drive for document storage? No problem. Need to embed a Google Calendar or YouTube video? It's a breeze. This interconnectedness streamlines content creation and management, allowing you to pull in existing assets with minimal effort. This synergy also extends to collaboration, making it easy for teams to work on a website together.

User-Friendly Interface and Drag-and-Drop Functionality

The learning curve for Google Sites is remarkably gentle. Its intuitive drag-and-drop editor means you don't need to be a coding wizard to build a beautiful site. Simply select elements from the sidebar, drag them onto your page, and customize them to your liking. This accessibility democratizes web design, empowering anyone to bring their vision to life.

Completely Free to Use

Perhaps one of the most attractive features of Google Sites is that it's entirely free. There are no hidden fees or subscription costs associated with building and hosting your website. This makes it an ideal solution for startups, small businesses on a tight budget, individuals exploring a new hobby, or educators creating classroom resources.

Mobile-Responsive Design Out-of-the-Box

In today's mobile-dominated landscape, a website that doesn't look good on a smartphone is a website that's losing visitors. Google Sites automatically generates mobile-responsive designs. This means your website will adapt seamlessly to different screen sizes, providing an optimal viewing experience for your audience, whether they're on a desktop, tablet, or phone. This is a crucial factor for **search engine optimization (SEO)**.

Built-in Security and Reliability

When you host your website with Google, you benefit from their robust security infrastructure. You don't need to worry about server maintenance, uptime, or security patches. Google handles all of that, ensuring your website is always accessible and protected.

Getting Started: Your First Steps to Building a Google Website

Ready to roll up your sleeves? Let's begin the journey of creating your Google website.

Accessing Google Sites

To start, you'll need a Google account. If you don't have one, you can create one for free. Once logged in, navigate to sites.google.com. You'll be presented with a dashboard where you can choose to start a new project from a template or begin with a blank canvas.

Choosing a Template or Starting Fresh

Google Sites offers a variety of pre-designed templates for different purposes, such as portfolios, event invitations, and small business showcases. These templates provide a solid foundation and can significantly speed up the design process. Simply click on a template to preview it and then select "Use this template" to start customizing.

Alternatively, if you have a clear vision and want complete control from the ground up, you can opt for a blank site. This gives you the freedom to structure your pages and design elements exactly as you envision.

Designing Your Google Website: A Step-by-Step Breakdown

Now that you've initiated your project, it's time to bring your website to life.

Understanding the Interface

The Google Sites editor is divided into a few key areas:

1. **Pages Tab:** Here, you can add, delete, and organize the pages of your website.
2. **Insert Tab:** This is your content toolbox. You'll find options for text boxes, images, embed codes, Google Drive files, and more.
3. **Themes Tab:** Customize the overall look and feel of your site by selecting color schemes and font

pairings.

4. **Editor Area:** The central workspace where you'll see and manipulate your page content.
5. **Publish Button:** Located in the top right corner, this is how you make your website live.

Adding and Organizing Pages

Click on the "Pages" tab on the right-hand side. To add a new page, click the plus icon. You can name your pages descriptively (e.g., "About Us," "Services," "Contact"). For better navigation, you can create subpages by dragging one page onto another. This will automatically generate a navigation menu for your site.

Populating Your Pages with Content (The "Insert" Tab is Your Best Friend)

This is where your website truly takes shape. Explore the "Insert" tab:

1. **Text Box:** Add headings, paragraphs, and lists. Use formatting options to emphasize key information.
2. **Images:** Upload images from your computer or select them from Google Drive, Google Photos, or by searching online.
3. **Embed:** This powerful feature allows you to embed content from other websites using an iframe or a URL. Think YouTube videos, Google Maps, social media feeds, or even content from other Google Workspace apps.
4. **Google Drive:** Directly link or embed documents, spreadsheets, presentations, and forms stored in your Google Drive. This is incredibly useful for sharing resources or information.
5. **Layouts:** Pre-designed content blocks with images and text to quickly add visually appealing sections.
6. **Buttons:** Create clear calls to action that link to other pages, external websites, or specific sections of your page.
7. **Collapsible Groups:** Ideal for FAQs, allowing users to expand and collapse sections to reveal information, saving space and improving readability.
8. **Table of Contents:** Automatically generates a navigable table of contents based on your page headings, excellent for longer pages.
9. **Image Carousel:** Showcase multiple images that users can cycle through, perfect for portfolios or product displays.

Remember to use high-quality images and concise, engaging text. ****Content is king****, and clear, valuable content is what will keep visitors on your site.

Customizing Your Website's Look and Feel (The "Themes" Tab)

Navigate to the "Themes" tab to select a pre-set theme. Each theme offers a unique combination of fonts, colors, and styles. You can further customize the selected theme by choosing different color variations. Consistency in design is key for a professional appearance. Ensure your chosen theme aligns with your brand or personal style.

Adding Navigation

Google Sites automatically creates a navigation menu based on the pages you've added. You can customize its appearance and placement by clicking the gear icon next to the "Publish" button. Options include a top navigation bar or a side navigation panel. Ensure your navigation is clear, logical, and easy for users to understand.

Advanced Features and Customization for a Polished Website

Once you have the basics in place, you can explore features to enhance your website's functionality and appeal.

Embedding Custom Code (HTML/JavaScript)

For more advanced users, Google Sites allows you to embed custom HTML and JavaScript. This opens up a world of possibilities, from adding interactive elements and custom widgets to integrating with third-party services not natively supported. Use the "Embed" option and select "Embed code." Be cautious when embedding external code and ensure you trust the source.

Setting Up a Custom Domain Name

While your Google Site will be hosted on a Google subdomain (e.g., sites.google.com/view/your-site-name), you can connect a custom domain name (e.g., yourwebsite.com) to make your site appear more professional and memorable. This process involves purchasing a domain name from a registrar (like GoDaddy or Namecheap) and then configuring its DNS settings to point to your Google Site. Detailed instructions are available within the Google Sites publishing settings.

Enhancing SEO with Google Sites

Search engine optimization (SEO) is crucial for ensuring your website is discoverable online. While Google Sites doesn't offer the granular control of dedicated CMS platforms, you can still implement effective SEO practices:

1. **Descriptive Page Titles and Meta Descriptions:** While Google Sites doesn't have a dedicated meta description field in the traditional sense, you can influence search results by using clear, keyword-rich titles for your pages and by writing compelling content within your text boxes.
2. **Image Alt Text:** When you upload images, you can add "alt text." This text describes the image for visually impaired users and is also read by search engines. Use relevant keywords in your alt text.
3. **Keyword-Rich Content:** Naturally incorporate relevant keywords throughout your website's text content.
4. **Mobile Responsiveness:** As mentioned, Google Sites automatically handles this, which is a huge SEO advantage.
5. **Site Speed:** Google Sites are generally well-optimized for speed, but avoid embedding overly large images or complex, slow-loading external scripts.

For more advanced SEO, consider integrating Google Analytics and Google Search Console once your site is published.

Collaboration and Sharing

Google Sites makes collaboration effortless. You can invite others to collaborate on your site by clicking the "Share with others" icon. Assign different roles (editor, viewer) to control their access. This is invaluable for teams working on a project.

Publishing Your Google Website: Going Live!

You've designed, populated, and refined your website. It's time to share it with the world.

The Publishing Process

Click the prominent "Publish" button in the top right corner. You'll be prompted to choose a web address for your site (this will be the part after `sites.google.com/view/`). Make it descriptive and easy to remember. You'll also see options to control who can view your site (publicly or restricted to specific people).

Reviewing and Launching

Before hitting the final publish, it's wise to preview your site one last time. Click the "Preview" icon (it looks like a computer screen and a tablet) to see how it will appear on different devices. Check for typos, broken links, and overall user experience. Once you're satisfied, click "Publish."

Maintaining and Updating Your Google Website

Launching your website is just the beginning. Ongoing maintenance and updates are crucial for keeping your online presence fresh and relevant.

Regular Content Updates

Keep your content current. Add new blog posts, update service information, showcase new projects, or refresh your portfolio. Regularly updated websites tend to rank better in search results and engage visitors more effectively.

Monitoring Analytics

If you've connected Google Analytics, regularly review your site's performance. Understand which pages are most popular, where your traffic is coming from, and how users are interacting with your content. This data is invaluable for making informed decisions about future content and design improvements.

Making Design Tweaks

As your needs evolve or as new design trends emerge, don't hesitate to make small adjustments to your website's layout, colors, or fonts. Google Sites makes these tweaks easy to implement.

Long-term Use

Long-term use of How To Make Your Own Google Website requires thoughtful planning, structured

organization, and ongoing maintenance to ensure that the content remains accessible, accurate, and valuable over time. Unlike temporary downloads or one-time reads, a long-term digital library functions as a living knowledge base that supports continuous learning, research, and professional development. Users who approach digital content strategically are more likely to gain lasting value and avoid common pitfalls such as data loss, outdated references, or disorganized archives.

Maintaining a dedicated library of *How To Make Your Own Google Website* allows users to revisit important concepts, verify information, and build cumulative understanding over months or even years. Digital libraries tend to grow rapidly, especially for students, researchers, and professionals. Without a clear system, files can become scattered and difficult to manage. Establishing folder hierarchies, consistent naming conventions, and logical categorization from the start prevents clutter and improves efficiency in the long run.

Regular backups are a cornerstone of long-term usability. Hardware failures, accidental deletions, corrupted storage, or software issues can instantly erase years of collected materials if no backup exists. Storing copies of *How To Make Your Own Google Website* on multiple platforms—such as cloud storage, external hard drives, and secondary devices—adds redundancy and resilience. Periodic verification of backups ensures files remain readable and complete, rather than assuming backups are functional without confirmation.

Long-term users also benefit from revisiting older editions of *How To Make Your Own Google Website*. Earlier versions often contain foundational explanations, original frameworks, or historical context that newer editions may condense or omit. Cross-referencing editions allows users to understand how ideas have evolved, recognize updates or corrections, and gain a deeper perspective on the subject matter. This practice is especially valuable in academic research and technical fields.

Building a sustainable digital library

A sustainable digital library balances expansion with maintenance. Adding new files without periodic review can lead to redundancy and confusion. Users should regularly assess their collections, remove duplicates, archive outdated materials, and replace obsolete editions with newer ones when appropriate. Documenting changes—such as when a file is updated or replaced—improves clarity and prevents accidental use of outdated information.

Long-term sustainability also involves selecting durable file formats. Widely supported formats like PDF and ePub ensure continued accessibility as software and devices evolve. Proprietary or obscure formats may become unsupported over time, risking data loss or compatibility issues. Choosing universal formats protects long-term access and usability.

Organizing Multiple Editions

Managing multiple editions of *How To Make Your Own Google Website* is a common challenge for long-term users, particularly in academic, legal, or professional environments where revisions are frequent. Without clear differentiation, users may unknowingly reference outdated content, leading to inaccuracies or misinterpretations. A systematic approach to edition management is therefore essential.

Labeling files with publication year, edition number, or volume information is a simple yet powerful method. Including this information directly in the file name allows immediate identification without opening the document. For example, appending “2021 Edition” or “Vol. 2” helps distinguish active references from archived materials at a glance.

Maintaining a catalog or index further enhances organization. A basic spreadsheet or document listing titles, editions, publication dates, sources, and storage locations provides a comprehensive overview of the library. This method is especially effective for users managing large collections or collaborating with others who require shared access and consistency.

Version control practices add another layer of clarity. Keeping a brief change log noting revisions, updates, or differences between editions helps users understand why multiple versions exist and when each should be used. This practice supports accuracy in citation, research, and collaborative workflows where precision is critical.

Archiving and retrieval strategies

Older editions that are no longer actively used should be archived rather than deleted. Archiving preserves historical reference value while keeping primary working folders uncluttered. Archived files should be clearly labeled and stored in designated folders, making retrieval straightforward when historical comparison or verification is required.

Effective retrieval strategies include searchable naming conventions, tags, and consistent folder structures. These practices minimize time spent searching for specific files and enhance long-term productivity, especially in large libraries.

Interactive Learning

Interactive learning features play a crucial role in enhancing comprehension and retention when using How To Make Your Own Google Website. Unlike passive reading, interactive elements encourage active engagement, prompting users to apply knowledge, test understanding, and explore content in greater depth. These features are particularly beneficial for complex, technical, or instructional materials.

Quizzes embedded within How To Make Your Own Google Website provide immediate feedback and reinforce learning objectives. By answering questions related to the content, users can quickly assess comprehension and identify areas requiring further study. Regular self-assessment strengthens memory retention and builds confidence over time.

Exercises and practice activities convert theoretical concepts into practical understanding. Interactive exercises encourage problem-solving, application, and experimentation, bridging the gap between reading and real-world use. This hands-on approach is especially effective for skill-based learning and professional training.

Multimedia elements—such as videos, animations, and audio explanations—address diverse learning styles. Visual learners benefit from diagrams and animations, while auditory learners gain value from spoken explanations. When integrated effectively, multimedia content simplifies complex ideas and

enhances overall engagement with How To Make Your Own Google Website.

Integrating interactive tools into study routines

To maximize learning outcomes, users should intentionally incorporate interactive features into their regular study routines. Scheduling time for quizzes, reviewing multimedia sections, and completing exercises reinforces knowledge and encourages consistent progress. Pairing these activities with traditional note-taking further strengthens comprehension and long-term retention.

Digital platforms often provide progress indicators, completion tracking, or performance summaries. Reviewing these metrics helps users evaluate improvement, adjust study strategies, and maintain motivation through visible achievements.

Balancing interaction and reference use

While interactive features enhance learning, long-term use of How To Make Your Own Google Website also depends on effective reference practices. Bookmarking key sections, creating personal indexes, and maintaining concise summaries ensure that information remains easy to locate and apply when needed. Balancing interactive learning with structured reference habits results in a versatile and efficient long-term resource.

Preserving compatibility over time

As technology evolves, preserving compatibility becomes essential for long-term access. Using widely supported formats such as PDF or ePub increases the likelihood that How To Make Your Own Google Website remains readable on future devices and software. Periodic testing on updated systems helps identify potential compatibility issues early.

When necessary, migrating files to newer formats or platforms ensures continued usability. Documenting original formats, conversion methods, and any changes made during migration helps preserve content integrity and prevents data loss during transitions.

Final thoughts on long-term use of How To Make Your Own Google Website
